

Sakhi Patel

Raleigh, NC | +1 (551) 389-4634 | sakhipatel20@gmail.com | [LinkedIn](#) | [GitHub](#)

Graduate student in Computer Science (Data Science track) at NC State University seeking a Summer 2026 Data Scientist internship. Experienced in Python, SQL, machine learning, ETL pipelines, and data visualization using Power BI and Tableau. Eligible to work in the U.S. for internships under F-1 CPT/OPT authorization.

EDUCATION

Master of Computer Science – Data Science Track

Expected May 2027

North Carolina State University - Raleigh, NC

- Coursework: Automated Learning and Data Analysis, Design and Analysis of Algorithms, Software Engineering

Bachelor of Technology in Information and Communication Technology

Oct 2021 – May 2025

Pandit Deendayal Energy University (PDEU) - Gandhinagar, Gujarat

- CGPA: 9.3/10
- Relevant Coursework: Data Structures and Algorithms, Probability and Statistics for Data Science, Machine Learning, Big Data Analytics, SQL, AI Systems, Computer Vision

SKILLS

- Programming:** Python, R, SQL
- Data & Analytics:** Pandas, NumPy, Excel, Power BI, Tableau
- Machine Learning:** Scikit-learn, TensorFlow, PyTorch, XGBoost, Regression/Classification Models
- Deep Learning & AI:** CNNs, Autoencoders, YOLOv8, OpenCV, NLP
- Tools:** Git/GitHub, Jupyter Notebook, VS Code, Google Colab

WORK EXPERIENCE

Data Analyst Intern

Jun 2024 – Jul 2024

Bhavi Technologies (India) Private Limited - Vadodara, India

- Automated SQL-based ETL pipelines across multiple sources, reducing processing time by 40% and enabling daily KPI reporting.
- Built Power BI and Tableau dashboards visualizing campaign performance and ROI.
- Collaborated with engineering and operations teams to standardize pipelines and improve data accuracy.
- Implemented QA checks to eliminate redundant records and fix schema mismatches.
- Documented ETL workflows and transformation logic for maintainability.

PROJECTS

GenoCompress AI | [GitHub Link](#)

Jan 2025 – May 2025

- Engineered a 1D CNN autoencoder-based genomic compression model for large genomic datasets.
- Achieved an 18.9× compression ratio (~6× better than GZIP) with 92.3% biological fidelity (validated using GATK).
- Improved runtime by 750% using GPU acceleration and parallel processing.

AI-Powered Suspicious Activity Detection System | [GitHub Link](#)

Sep 2024 – Dec 2024

- Led a 3-member team developing a real-time surveillance system using YOLOv8 and OpenCV for weapon and mask detection.
- Achieved 87% precision, 83% recall, and 85% mAP@0.5, sustaining 25 FPS inference.
- Implemented a proximity-based false positive reduction algorithm to improve reliability in crowded scenes.

Analytics Projects (Independent)

May 2024 – Jul 2024

Trainity Program | [GitHub Portfolio](#)

- Completed 8+ analytics projects applying SQL, Excel, and Power BI to HR, finance, customer service, and social media datasets.
- Reduced projected call center abandonment from 30% to 10% using a staffing optimization model.
- Analyzed Instagram data (50K+ users) using MySQL to identify inactive segments and detect bot accounts.
- Examined 4,400+ HR records to identify salary and gender disparities and enhance reporting accuracy.
- Designed dashboards summarizing HR and financial KPIs; presented insights and recommendations as part of formal project evaluations.
